

A Website for Veterans

www.myhealth.va.gov

My Health_eVet is a website created especially for veterans. Using it, veterans may order prescription refills; access trusted sources of health information; create, maintain and control your own personal health journal; add information to your personal health journal about over-the-counter medications, herbals and supplements, allergies, tests, immunizations, medical events, military health history, and family health history; and record and track personal health readings such as blood pressure or blood sugar, cholesterol, heart rate, body temperature, weight, and pain.

... And now, you can see the names of your prescriptions when you use My Health_eVet for Prescription Refill!

Because this new feature releases more personal information to the veteran, additional security measures are required to protect each patient's privacy.

In order to be able to view the prescription names, you must do the following:

1. Be a registered user of My Health_eVet
2. View a DVD that is available on the My Health_eVet website, in the Release of Information office, and in the Library
3. Complete a Release of Information form
4. Present the form and a picture ID (VIC or driver's license) to Release of Information staff, located in:
 - Temple Release of Information – basement of Building 163, Rm. BC 122
 - Temple Medical Library – 1st floor of Building 204, Rm. 1K04

Veterans who successfully complete this procedure will also, in the future, be able to check appointments, lab values, and other portions of the electronic health record when those capabilities are added. These new features are not yet available. They will be added a piece at a time and will be announced as they are released.

We plan to offer this "In-Person Authentication" process at Waco, Austin and the CBOCs soon. If you have questions regarding this process, please send an email to joanne.greenwood@va.gov, or call extension 40606.
